DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Claims 33-46 drawn to 3 species of reactions which are further generic to the reactants.

Claims 47-56 drawn to a species of silica particles and further generic to the bridge chain.

Claims 57-64 drawn to a species of silica particles and further generic to connecting material and bridge chain groups.

Applicant is required, in reply to this action, to elect a single species of group of claims and further appropriate species of connecting material and/or species of bridge chain, to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 33-37, 39, 41-43, 45 and 47-64.

2. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: The different chemical structure and properties of the bridge groups and connecting materials as well as the reactions resulting in the networked silica particles result in products that do not relate to the same technical feature.
